ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: METHOD AND APPARATUS FOR FEEDING FLAT PRINTED PRODUCTS

(57) Abstract: The invention refers to a method and an apparatus for gathering flat printed products by selecting a single printed product from each of a multitude of collections of identical printed products and conveying the selected printed products towards a collecting conveyor (10), which runs along a generally straight line in a first direction (11). To improve the transfer of the flat printed products to the downstream machinery, it is suggested to - advance the printed products in a second direction (15) in a continuous flow of printed products with a feeder (1) with feeding elements upstream of the collecting conveyor (10), - grip a leading portion (20) of a printed product at the discharge end of said feeder (1) by separating grippers (60) of a transferring conveyor (40) which is also arranged upstream of the collecting conveyor (10) and - transfer the gripped printed product with the transferring conveyor (40) substantially along a path, which takes its course generally along the first direction (11) of the collecting conveyor (10).
